--	---

## Field Summary

	<a href="#"><b>message</b></a> - The content of the message.
	<a href="#"><b>messageType</b></a> - The type of the message.

## Namespace Detail

### datachannelMessage

The datachannel message is sent over the datachannel of the peer connection to the other peer. Datachannel messages can contain various properties. The property 'messageType' and message are mandatory. A datachannel is encrypted and bound to the two peers. Authentication is not needed, cause only this peers have access to the messages.

```
peerConnection.dataChannel.send({
  messageType: 'system',
  message: 'bye'
});
```

```
peerConnection.dataChannel.send({
  messageType: 'user',
  message: 'Hello Bruce. How are you?'
});
```

## Field Detail

*{string}* **message**

- The content of the message. System messages contain system commands like 'bye'. User messages contain chat messages.

*{string}* **messageType**

- The type of the message. Types: 'system', 'user'.
